

Ontario County Tax Parcel Data

Where the Data Comes From

Boundaries: These are maintained by tax map technicians in the Ontario County Real Property Services office. The data are edited using ESRI ArcGIS desktop software, with the data stored in an SDE enterprise database using SQL Server 2017. In addition to the parcel boundaries, many other layers are also updated to facilitate tax map preparation. This is stored in *State Plane, New York Central Zone*, units in feet.

Attribution: Each Town and City Assessor (18 communities) handle update of all property assessment data in the New York State desktop program, RPSv4. This includes a range of information including ownership (current and prior), inventories, land description and of course, detailed tax assessments. Special tables are processed providing development obstructions (due to wetlands and/or steep slopes), tax maps and tax bills lookup.

Update Schedule

Boundaries: The boundaries (as well as the rest of the tax map data layers) are updated daily. However, once a year the spatial information is frozen on March 1st. This is the “taxable status” date. The data posted on the OnCOR website and provided upon request represents this static snapshot.

Attribution: The RPSv4 database is received from the Town and City Assessors several times a year.

- Tentative Roll – May 1 (June 1st for the City of Geneva)
- Final Roll – July 1 (August 1st for the City of Geneva)
- School Taxes – September 1st (October 1st for the City of Canandaigua School District)
- County and Town Taxes – November 1st updates from only Towns

Data Review and Corrections

The boundaries and extracted RPSv4 database files are joined together using the unique tax map ID number (Print key value). This is followed by a QA/QC analysis identifying mismatches (i.e., parcels that do not match any RPSv4 assessment records). Problems can occur for many reasons; some simply resolved such as data entry errors, while others are recurring issues that must be corrected within the local assessor’s database. *Listed below are typical cases:*

Mismatch Reason	Method for Fixing
Tax parcel boundary print key value is incorrect	Print key value is updated
RPSv4 has not been updated for new print key value after a split or merge of boundaries	Local assessor is notified by the Real Property Office that the RPSv4 database must be updated.
The record is missing from the RPSv4	These cases are usually long-standing problems, typically road ROW land and large subdivision common land. Correction has been pending in the local assessor RPSv4 database for many years.
